

DESIGN CHALLENGE

Institution of
**MECHANICAL
ENGINEERS**

Get involved in the next Design Challenge!

Are you a student at university or university technical colleges? Get a taste of 'real world' engineering by taking up our educational engineering competition.

Competing in groups of 3-6 students and with a low bar to entry, teams must design, create, present and run a pipe climbing robotic device to a strict technical specification.

Teams will go head to head at exciting regional competitions between March to June to show off their devices and justify their engineering decision making, with the winners going on to the finals at the IMechE's London headquarters to be crowned the champions.

With a low bar to entry, students can gain realistic experience of an engineering project together with business and people skills, complementing their academic work. Find out how you can get involved this year!
